PerfoTec C+ Film 500

The PerfoTec C+ Film 500 is a patented, certified compostable by TUV Austria and biobased film for vertical flow packaging machines to pack Brussels Sprouts or fresh cut flowers. The extension of freshness is only reached if this film is combined with PerfoTec equipment to customize laser perforations. This material is made of natural potato starch and other biologically sourced polymers. The colour of this film is milky. This film is suitable for bulk flow packaging. Due to the water vapor permeability properties and balanced CO2 transmission level combined with PerfoTec technology unimaginable shelf-life results can be achieved.

Features & Benefits

Maximized shelf life of fresh products

Certified home compostable material by TUV Austria

Suitable for flowpackaging

Plasticizer & GMO free
